

SARS-CoV-2 Variant Tracking

A targeted approach for nucleic
acid-based diagnostics

Emma-Claire McCarthy

80,000+

COVID-19 sequences available
with

29,903

base pairs each

NARROWING THE SCOPE

- Most nucleic acid-based COVID-19 tests are targeting the **N gene**
- Create custom variant designations based on this gene alone

VARIANT DESIGNATION USING UNSUPERVISED MACHINE LEARNING

OBTAIN N GENE SEQUENCES ... ATGTCTGATAATGGACCCCAAATCAGCGAA ...

TRANSLATE INTO "TEXT" ... atgtct tgtctg gtctga tctgat ctgata tgataa gataat ...

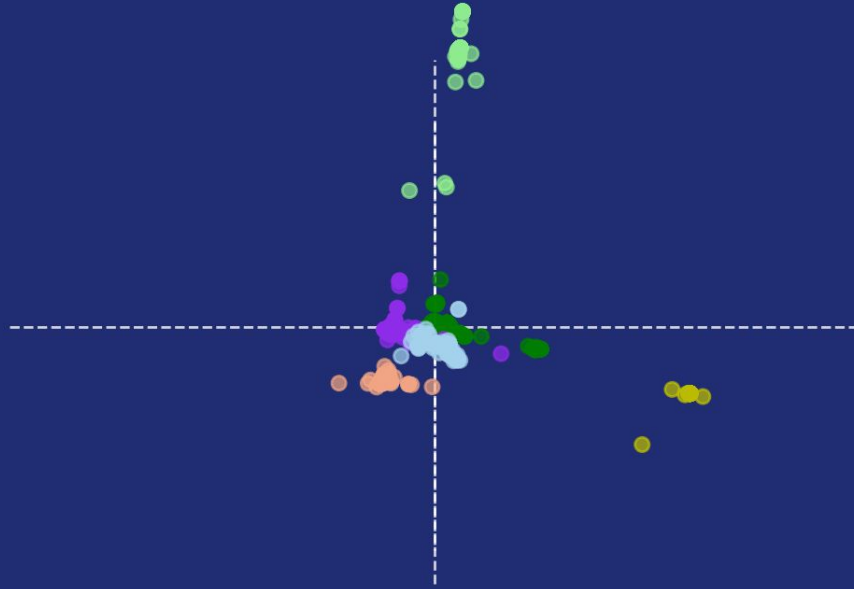

APPLY NLP AND CLUSTERING METHODS

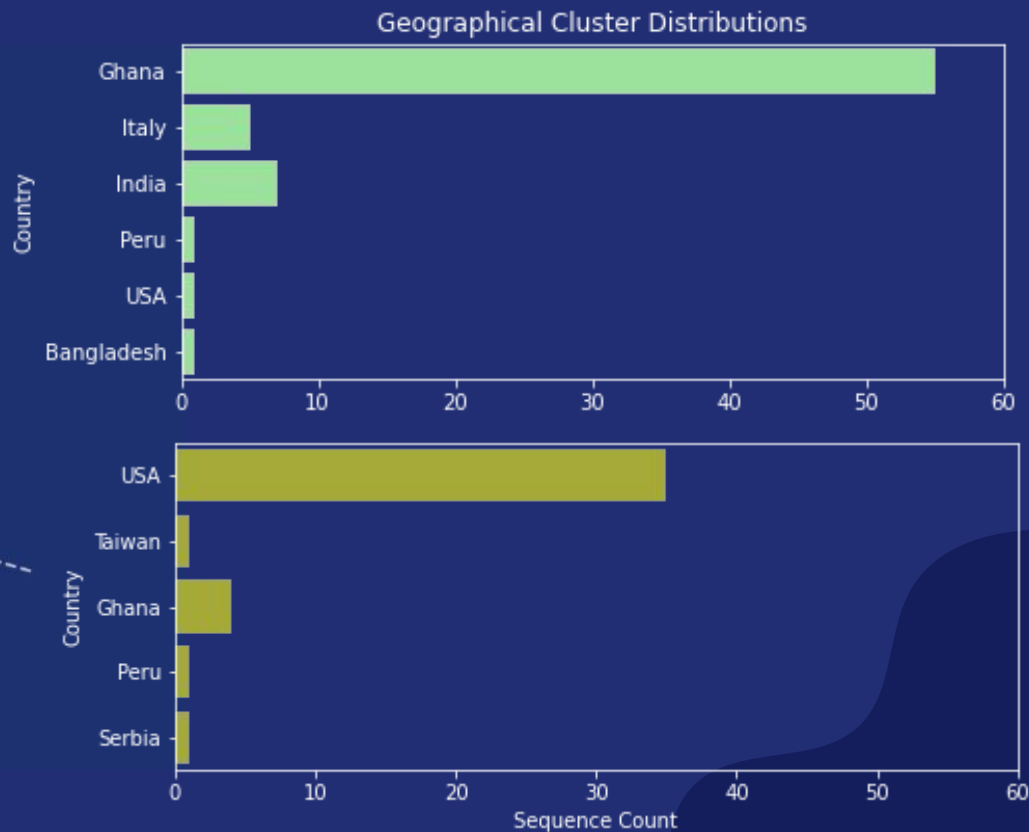

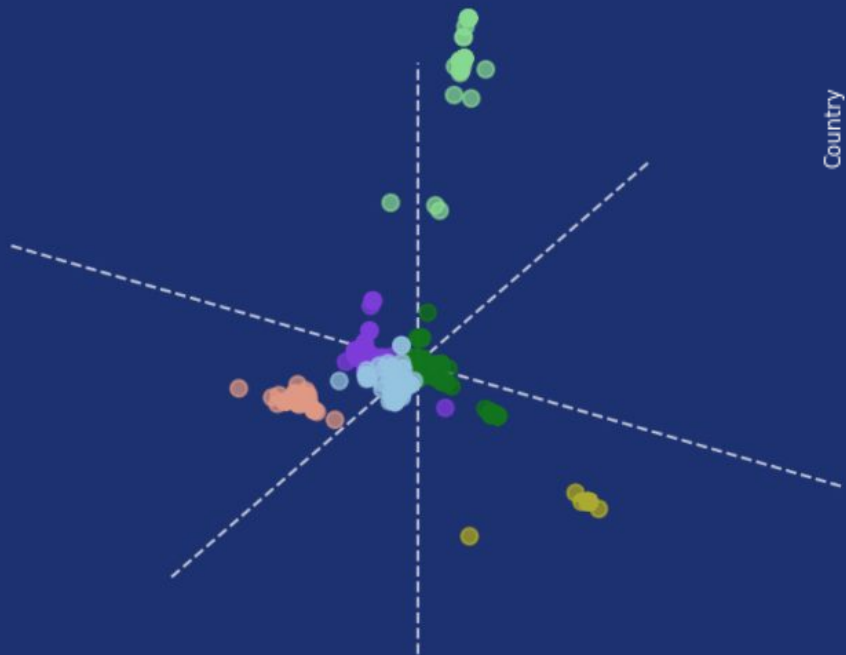

EXPLORE THE RESULTS

SIX CLUSTERS IDENTIFIED USING A K-MEANS MODEL

OUTLYING CLUSTERS HAVE DISTINCT GEOGRAPHICAL DISTRIBUTIONS

Abstract

Go to: ☒

The confirmed case fatality rate for the coronavirus disease 2019 (COVID-19) in Ghana has dropped from a peak of 2% in March to be consistently below 1% since May 2020. Globally, case fatality rates have been linked to the strains/clades of circulating severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2)
